Un1co

All your equipment, in
one **unique** mobile
Workstation

Un1co is a modular transport system convertible in a stand alone workstation, specifically designed by Fibernet in order to ease the fiber optic in-field operation.

It's entirely made of **carbon fiber**, which ensures resistance and lightweight (approx. **15 kg** without instruments). **Un1co** is much more than a simple

workstation: closures can be easily fixed to the workbench on its multifunction **restraining rail** and extra room can be easily provided by its **two extending shelves**.

One system, lot of benefits

What's inside **Un1co**

Un1co is designed to achieve all the customer's requests.

All the interiors are modular, and can fit with most of the instruments and accessories available on the market.
